

The System of The Problem

- A) Sketch the problem and the system that surrounds it (5 minutes)

- B) Find a partner from another group and begin interviewing (one problem at a time):

- C) Explore how each person/group involved in the problem may perceive it (if there are many involved, prioritize):
 - 1) How do you think ... views the problem?
 - 2) What do you think... thinks is the most difficult thing about the problem?
 - 3) What do you believe...thinks he/she should do about it?
 - 4) What opinions do you believe....have about what other people should do about the problem?
 - 5) What opinions do you believe....have about what you should do about the problem?
 - 6) What kind of dilemmas are there for...in the situation?
 - 7) What consequences do you think this can have for the problem?

And finally:

What do you consider now about how you and your group can approach the problem?
